

star[★] TSP100 PoweredUSB

The World's 1st Dedicated PoweredUSB Printer

Benefit from improved cable management and, more importantly, being able to cost-effectively use the same UPS on both your POS station and printer at the same price as a traditional printer.

USB is now the industry's preferred communication link between a PC and a printer; so what is the next logical step - to combine the power supply and interface to produce PoweredUSB. As a result, Star had developed the world's first dedicated PoweredUSB printers offering significant cost advantages over competitor products for all types of retailers.

As usual, the POS market is in an IT transition with the future looking at PoweredUSB terminals and peripherals. The key advantage includes now being able to cost-effectively include UPS (Uninterrupted Power Supply) cover on both the PC and printer so that all transactions will be protected. The TSP100USB is therefore perfect to replace single station use with a free-of-charge upgrade path when the retailer decides to follow the industry and use PoweredUSB POS Terminals at the same price as a traditional single station printer.
